<p>(54) Title: A FRAME UNIT FOR USE IN CONSTRUCTION FORMWORK</p> <p>(57) Abstract</p> <p>A frame unit (11) used in the construction of a formwork module. The frame unit (11) is formed by connecting together rectangular loops of wire (12, 13) to form a rectangular block shape. Panels (60) and reinforcement (16) are connected to the frame to make a formwork module, with the reinforcement (16) extending beyond the sides of both the frame unit (11) and the panels (60). When a number of modules are connected together to form formwork for the desired building structure, the reinforcement (16) overlaps to form a continuous line of reinforcement from one module to the next.</p> <div data-bbox="630 1024 1352 1497"></div> <p>(3D VIEW)</p>
